About Aridis Pharmaceuticals, Inc.

Aridis (Nasdaq: ARDS) is a late-stage biopharmaceutical company focused on discovering and developing targeted immunotherapies using fully human monoclonal antibodies, or mAbs, to treat life-threatening infections. The use of mAbs represents an innovative treatment approach that harnesses the human immune system to fight infections and is designed to overcome the deficiencies associated with the current standard of care, broad spectrum antibiotics. Such deficiencies include, but are not limited to, increasing drug resistance, short duration of response, perturbation of the human microbiome, and lack of differentiation among current treatments. Aridis' pipeline includes AR-101, a fully human immunoglobulin mAb targeting *P. aeruginosa* serotype O11, which accounts for approximately 22% of all *P. aeruginosa* hospital acquired infections worldwide; AR-301, a fully human immunoglobulin 1, or IgG1, mAb targeting hospital-acquired pneumonia, or HAP, and ventilator-associated pneumonia, or VAP, *S. aureus* alpha toxin; AR-105, a fully human IgG1 mAb being developed to treat acute pneumonia caused by *P. aeruginosa* infection; AR-501, a broad spectrum small molecule anti-infective being developed to manage both chronic lung infections in cystic fibrosis patients; AR-401, our preclinical mAb program aimed at treating infections caused by *Acinetobacter baumannii*; and AR-201, a fully human IgG1 mAb that neutralizes diverse clinical isolates of respiratory syncytial virus, or RSV.
